

How we help with your AI agenda

We understand that you are facing the challenge of beginning your AI journey, in waters largely uncharted in Australia or the world.

This journey includes reimagining service delivery and regulation, harnessing AI in the policy design and national security spaces, and responding to the rise of AI in industry and the community.

We recognise the significance of these shifts. Our insights and expertise will empower you to lead with confidence and deliver for your people and the Australian community.

AI Readiness Assessment

Get your agency set up for AI success with our comprehensive AI readiness assessment.

Using our public sector-specific AI maturity model, we evaluate your readiness top-to-bottom, from governance, leadership and culture to data, technology and capability, and create the roadmap to lift your maturity.

The deliverables

- ✓ An AI Readiness Assessment Report
- ✓ A Readiness Roadmap and action plan, co-designed to help you navigate your readiness uplift process

AI Strategy Development

Understand how AI could elevate your organisation's potential with our AI Strategy Development service.

We co-design a strategic AI vision and explore the transformative changes and novel risks AI will present.

Our co-design process ensures alignment with your priorities, values, and the deep needs of your stakeholders and users.

The deliverable

- ✓ An AI Strategy that charts your strategic AI journey, over an appropriate horizon, integrated into your broader strategic landscape

AI Innovation Accelerator

Our AI Innovation Accelerator brings you and your stakeholders together for an intensive 1 – 2 day workshop, where we conduct an opportunity scan, identify and design up to 3 high-potential AI initiatives.

The process will kick-start your AI transition, helping you innovate safely & meaningfully within your priorities..

The deliverable

- ✓ An inspiring accelerator workshop, online or in our purpose-built studio
- ✓ 1 – 3 Initiative Blueprints

Why ThinkPlace?

We are experts in government

ThinkPlace understands government. We understand the nuances of AI within government contexts. Our services address the unique needs and challenges government entities face. Whether it's a federal, state or territory agency, or transnational organisations like the UN or the G20, government and government-adjacent organisations are our focus.

We've been part of the government AI story since the beginning

We ran Australia's first government-focused AI ethics course, and since then have ran professional development for hundreds of SES on digital transformation, including AI.

Whether we're co-designing an AI ethics framework, running a national consultation on AI regulation, blueprinting AI-enabled regulatory or service delivery initiatives, conducting a community survey on AI social license, looking at models for AI to create on-country opportunity, or creating AI forecasts and strategies in thematic areas like health or environmental regulation, we know what works and have the track record to prove it.

AI governance and ethics are key to our work with AI (and everything else)

ThinkPlace is a strictly ethical consultancy, and always have been. We have high ethics screening standards, we don't tolerate conflicts of interest or unethical practice, and we don't work on colour-washing projects or projects that undermine society, the environment, the economy, or their regulatory protections.

It's no wonder then that AI ethics are a deep specialisation for ThinkPlace. We bring unique, relevant insight to the ethics and governance challenge that's as important as the technology itself.
